Education	KL University Computer Science and Engineering 9.00 / 10.00	2020 - 2024 B Tech	Sarada Educational Institutions Board Of Intermediate Education 8.28 / 10.00 2018 - 2020 12th - MPC
Experience	Streak Business Solutions Pvt Ltd Java Developer Intern - Worked on Elite Gmart which is an E-commerce platform where i have developed Mail OTP Validation, Server Side Validations, Client Side Validations. - Worked on Admin Portal of Online Exam Portal, where the admin can create the exam paper with suitable requirements and can give access to the particular students to start the test with robust validations. Used Springboot for the backend processing. Used Cache storage for data storage and data retrieval as well. Used MySQL for backend database. - Developed an User-Interface and Backend for kryssolutions.com website which contains contactform. Used NodeJS and NodeMailer to recieve the response of the contactform to the company's mail directly. Used Multer which acts as middleware to handle the form-data. Used MySQL to store the form-data in database. WebFurther India Pvt. Ltd Content Moderator Project: Adobe (Image Moderation) - Currently working as a Content Moderator at WebFurther India Pvt. Ltd in Hyderabad. - My Role and Responsibilities includes analyzing large volumes of user-generated image content to ensure alignment with platform policies, legal regulations, and community standards. - Collaborating with internal QA and policy teams to enhance moderation rules and improve process efficiency. - Used data-driven insights to recommend improvements to moderation workflows, contributing to more efficient handling of edge-case scenarios.		
		March 2024 - Oct 2024	Hyderabad
		November 2024 - Present	Hyderabad
Projects	Elite Gmart - As part of my work at StreakBS, I worked on a project called Elite Gmart, an e-commerce platform which was built using SpringBoot and MySQL as Backend Database. - Mail OTP Validation was implemented for user account verification. This module was developed using both Nodemailer and an SMTP server. - The application allows clients to add, remove, and update product details, including cost prices. - Server-Side and Client-Side Validations were implemented for the user registration and login modules, as well as for adding, removing, and updating products with their cost prices. Online Exam Portal - Worked on Admin Portal of Online Exam Portal, where the admin can create the exam paper with specific requirements and can give access to the respective students to start the test with robust validations. - Used Springboot for the backend processing. Used Cache storage for data storage and data retrieval as well. Used MySQL for backend database. - Focused on efficient data flow, performance monitoring, and ensuring a scalable architecture to handle exam sessions. Tender Management System - Me and My Teammates have created Tender Management System Project using Java Full Stack Development. - Our project shows the way of approaching tendering. This web application has full control of tender process for the users and collaborate strategically. - Responsible for database schema design, data validation, and business logic integration using MySQL.
