

LIVE QUIZ PROJECT INSTALLATION

Tools: Apache NetBeans IDE 21, MySQL Workbench, Java 18

Technologies: SpringBoot with MicroServices, BootStrap, HTML, CSS, JavaScript, MySQL as Backend Database

Procedure:

- Install JDK 18 specifically for this project to ensure compatibility and optimal performance.
- To run the live quiz project in Apache NetBeans, configure and deploy it on Apache Tomcat Server version 9.0.88.
- Download apache-tomcat-9.0.88 from web browser or you can go through below link for download.
Link : https://drive.google.com/file/d/1HH0xip5NLfsMTFfvJTs5wu1PTfPfgR_y/view?usp=sharing
- Now download Apache NetBeans IDE 21 from web browser or you can go through below link for download.
Link : <https://drive.google.com/file/d/1gEpCZrQj4HsUHBvs2uuv9XL-J7E-U4jY/view?usp=sharing>
- After successful installation of Apache-tomcat-9.0.88 server and Apache NetBeans IDE 21, Open Apache NetBeans IDE 21.
- And make sure that apache-tomcat-9.0.88 folder should be there in OneDrive\Documents\NetBeansProjects path.
- In Apache NetBeans IDE 21, go to servers.
- Right click on servers and click on add servers.
- In add servers, select Apache Tomcat or TomEE. Then in server location go and select apache-tomcat-9.0.88 version folder which was already unzipped from the folder. No need to enter username and password. Now Click on Finish. Now Apache Tomcat server is been added in your netbeans.
- Sometimes while adding the server, the catalina issues will be getting over there. There we need to give access to the apache tomcat version. In such cases, click on apache-tomcat-9.0.88 version folder. There you can give access to catalina by clicking continue. Now the access will be given to the apache tomcat version. And now you will be able to add your server without any problems.

- Make sure that JDK version should be 18 i.e JDK 18 for this live quiz project specifically. To check whether the JDK version is 18 or not, right click on added server. Go to properties. Go to platform. In platform, the JDK version will be available. Check the JDK version in that.
- Now check whether tomcat server is working or not. To check whether tomcat server is working, right on created server. Then click on start. In your console, the server will be started and your server will be running on particular port.
- If your server is not running properly, then we need to add the server again and follow the same procedure.
- After successful of all above steps, now we need to add the project in apache netbeans.
- Project link:
<https://drive.google.com/file/d/1zFkXP0MbiQCwJ5UFLPwUJmiGEVWQdNnP/view?usp=sharing>
- Download the project from above link.
- After downloading the project, keep that zip folder in your OneDrive\Documents\NetBeansProjects folder.
- Now unzip that project folder into same directory i.e OneDrive\Documents\NetBeansProjects folder.
- Now you need to keep two jar files in NetBeanProjects folder.
Two jar files links:
Link 1:
https://drive.google.com/file/d/1Q_8oRhswRqjMwhzQlMZ1RFLW0bBXPX6/view?usp=sharing
Link 2:
https://drive.google.com/file/d/1RXz1OdIdFlbZmy13u-YHoHN1tZ0du_uO/view?usp=sharing
- Place above two jar files into OneDrive\Documents\NetBeansProjects folder.
- The following things should be there in OneDrive\Documents\NetBeansProjects folder:
 1. Both zip and unzipped folder of your project i.e dempproj.
 2. Two jar files i.e activation-1.1.jar , javax.mail-1.6.2.jar
 3. apache-tomcat-9.0.88 folder.
- If any of the above files are missing in the OneDrive\Documents\NetBeansProjects folder, then the project might lead to issues and cannot be run properly.
- Now go to apache netbeans.

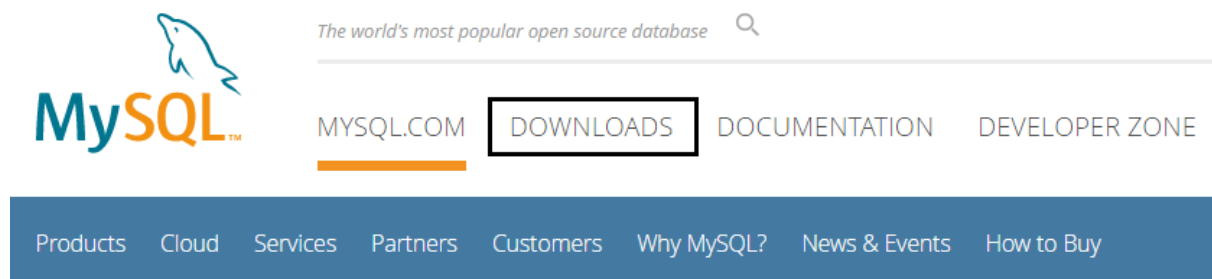

- Go to projects. Right click on projects and click on open projects. Select the project folder which was already unzipped. Then click on open project.
- Now the selected project will be opened in the projects.

Install MySQL Workbench:-

Follow the below steps to install MySQL Workbench on Windows:

Step 1: Browse to the [official MySQL Website](https://www.mysql.com/).

Step 2: There you will find the *Download* button.

Step 3: Scroll down & click on MySQL Community (GPL) Downloads.

[Learn More »](#)

[Customer Download »](#) (Select Patches & Updates Tab, Product Search)

[Trial Download »](#)

[MySQL Community \(GPL\) Downloads »](#)

Step 4: Click on MySQL Installer For Windows.

using my Oracle Web account

MySQL.com is using Oracle SSO for authentication. If you click the Login link. Otherwise, you can signup for a free account and follow the instructions.

No thanks, just start my download.

Step 7: Click on the Custom button.

MySQL Installer
Adding Community

Choosing a Setup Type

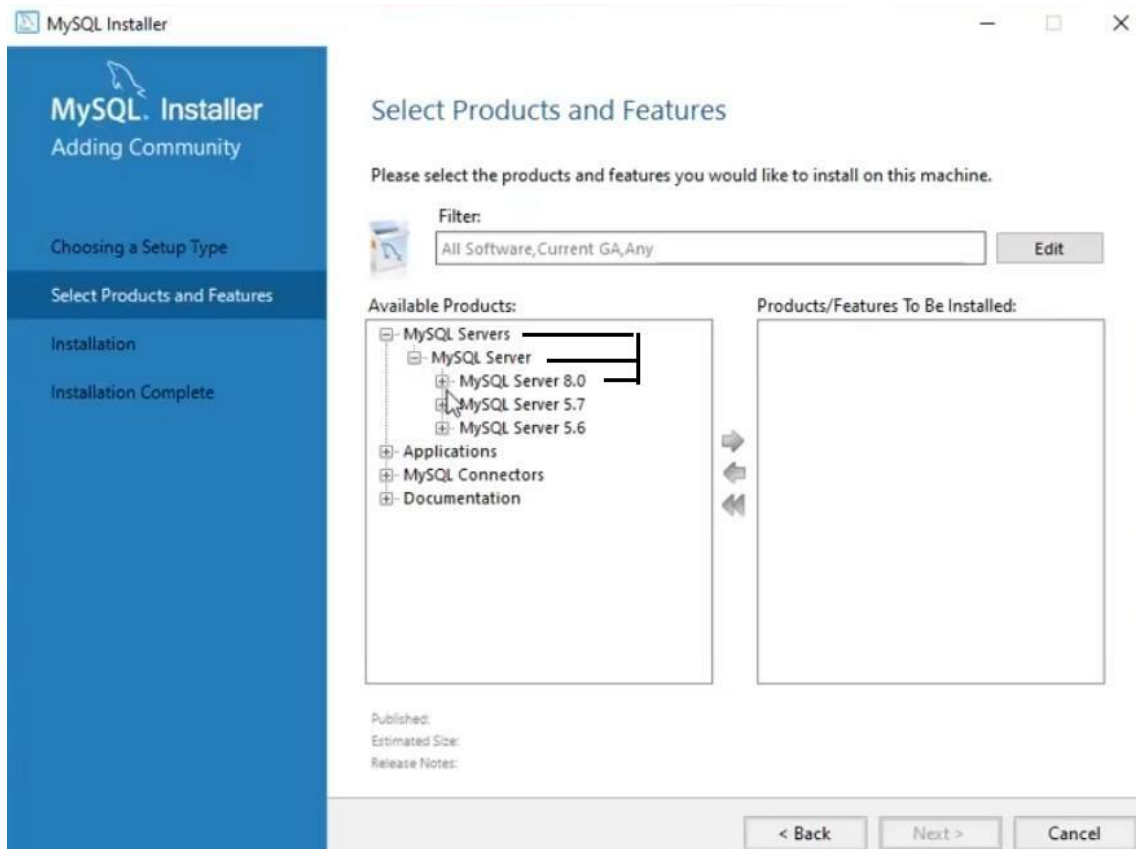

Please select the Setup Type that suits your use case.

- ☐ Developer Default
Installs all products needed for MySQL development purposes.
- ☐ Server only
Installs only the MySQL Server product.
- ☐ Client only
Installs only the MySQL Client products, without a server.
- ☐ Full
Installs all included MySQL products and features.
- ☒ Custom
Manually select the products that should be installed on the system.

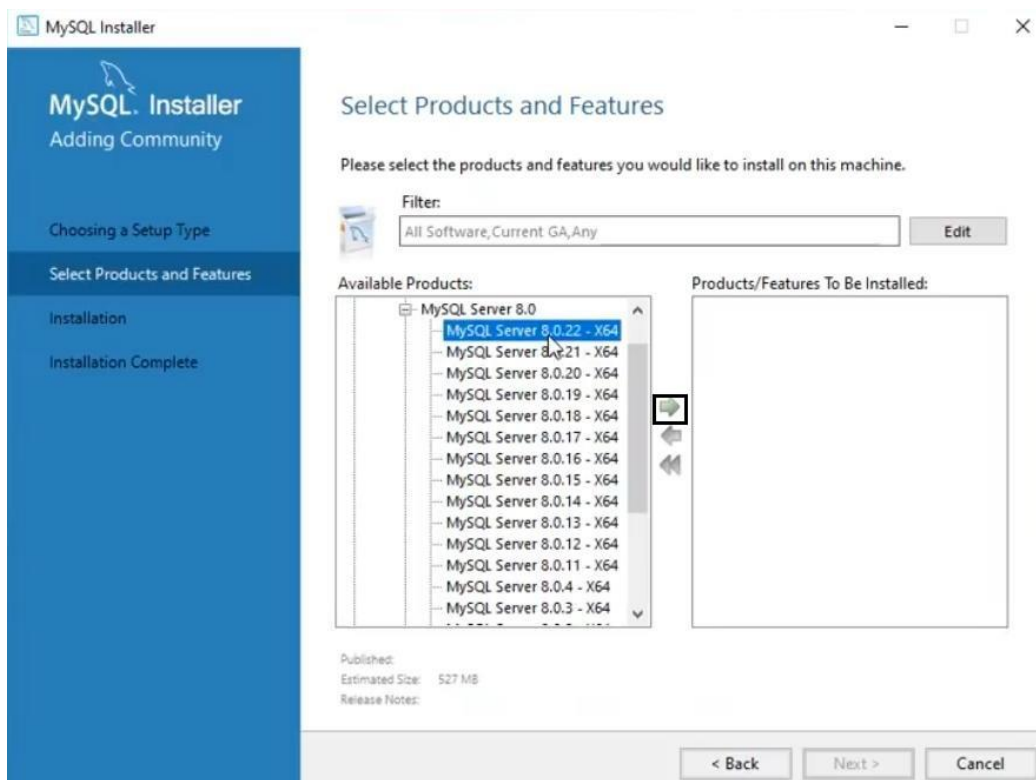

Setup Type Description
Allows you to select exactly which products you would like to install. This also allows to pick other server versions and architectures (depending on your OS).

[Next >](#) [Cancel](#)

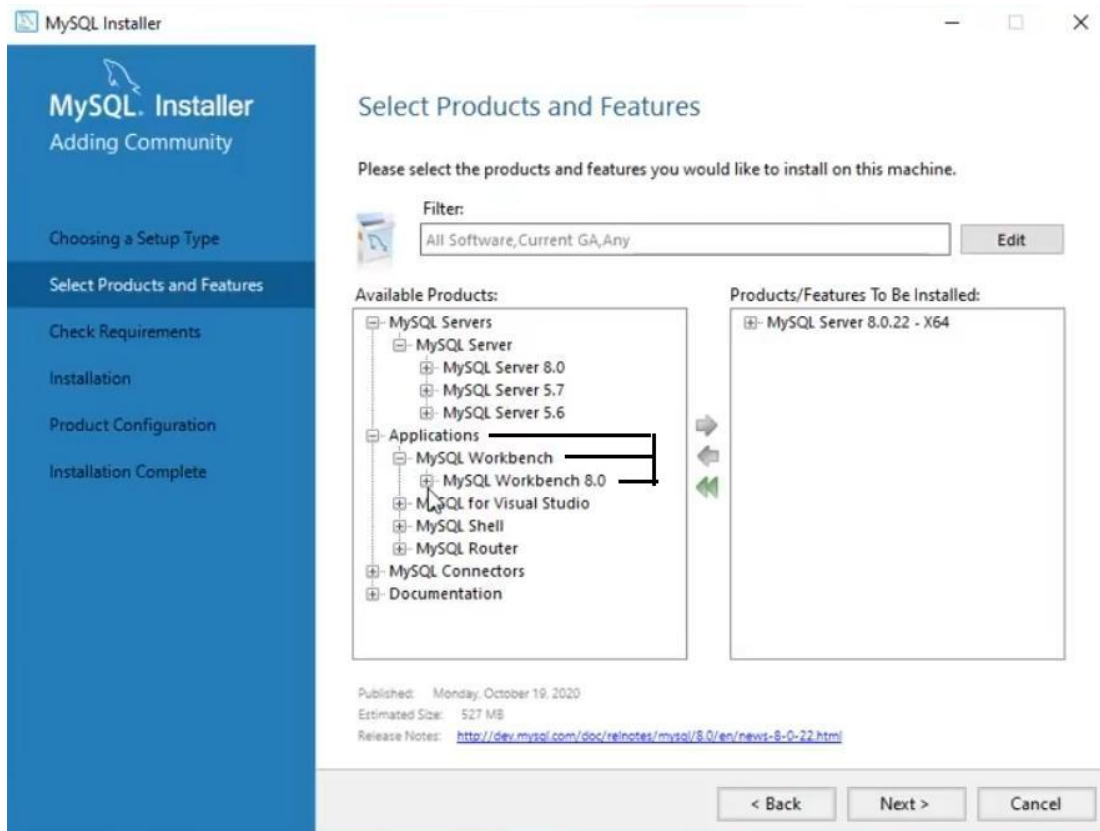

Step 8: Expand MySQL Server & then expand MySQL Server 8.0.

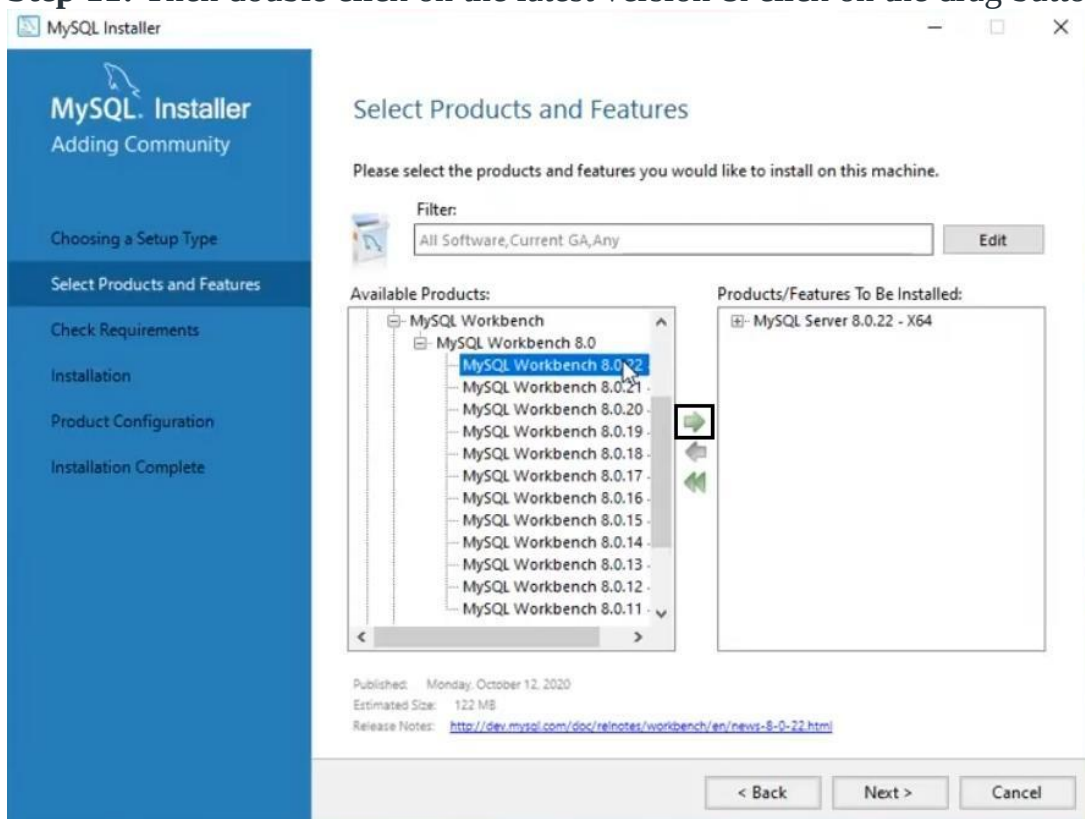

Step 9: Then double click on the latest version & click on the drag button.

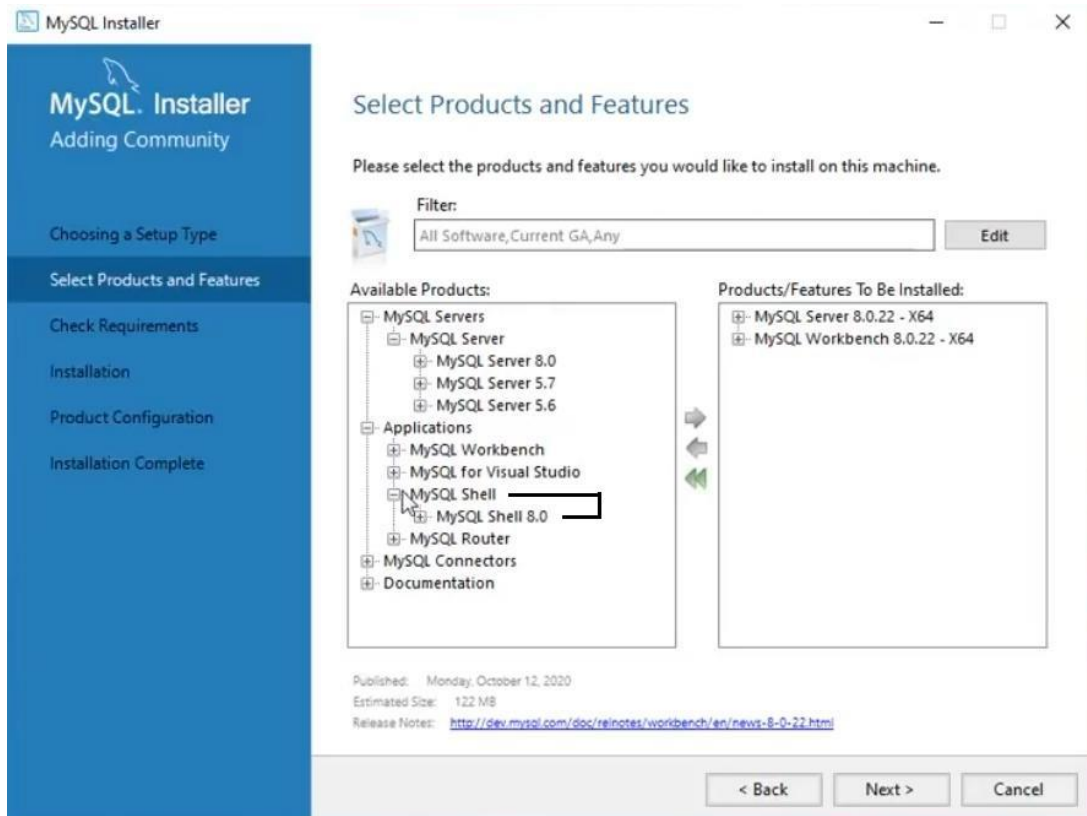

Step 10: Then expand Applications & Then expand MySQL Workbench 8.0

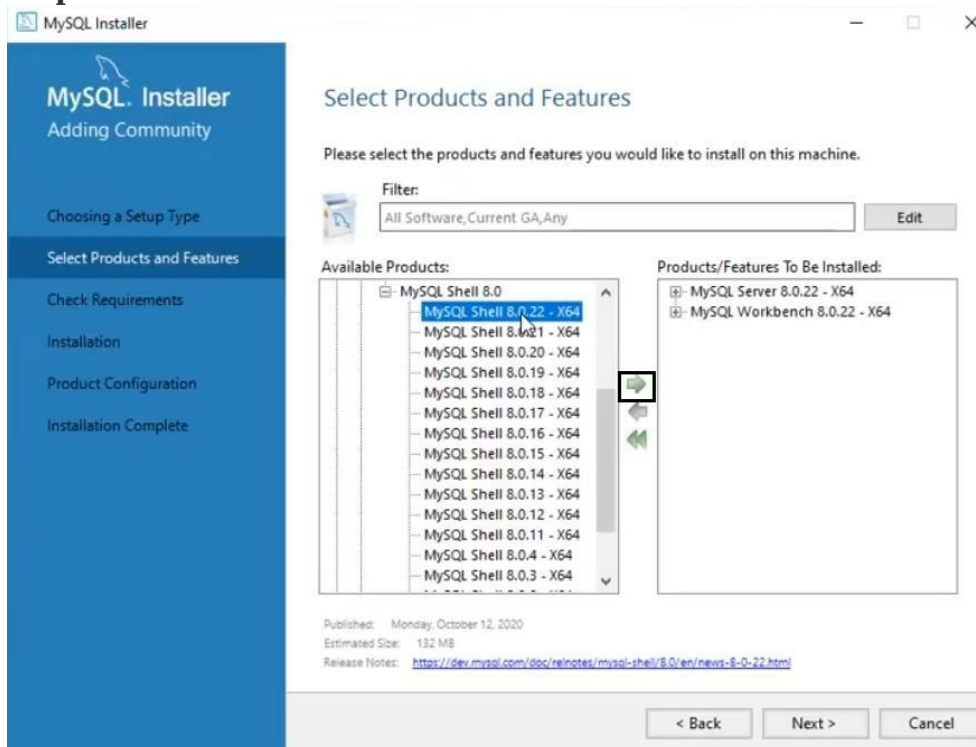

Step 11: Then double click on the latest version & click on the drag button.

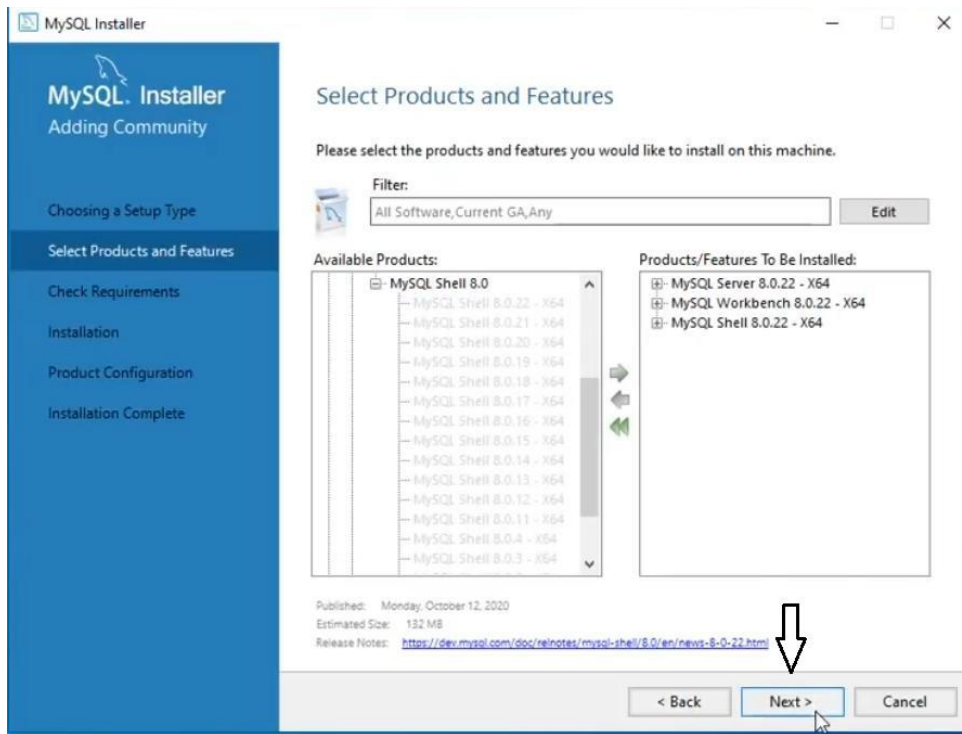

Step 12: Then expand MySQL Shell & then expand MySQL Shell 8.0

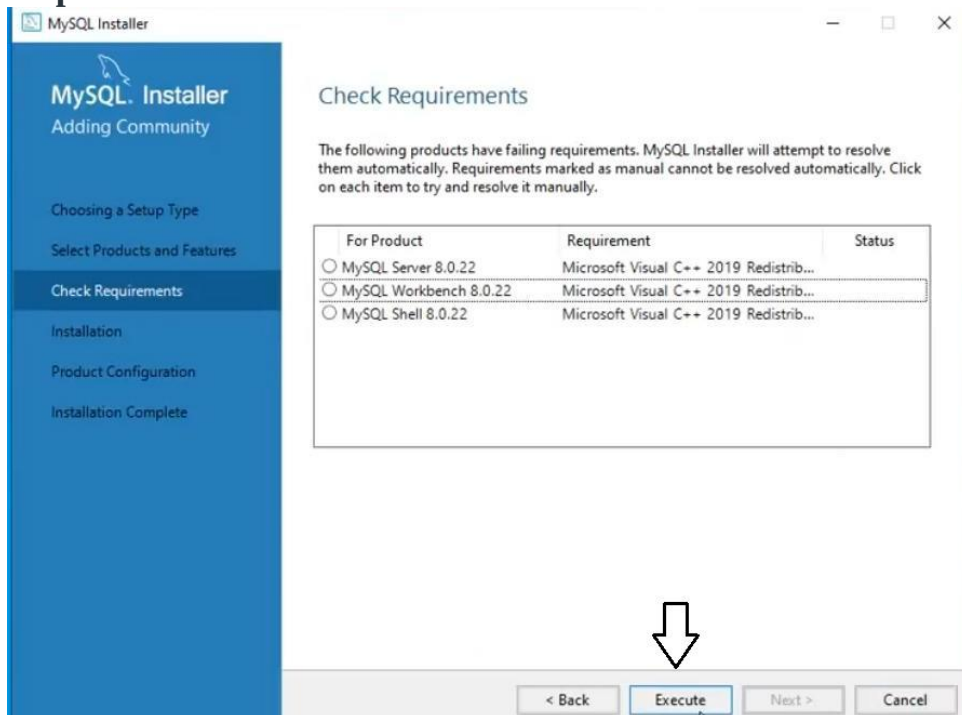

Step 13: Then double click on the latest version & click on the drag button.

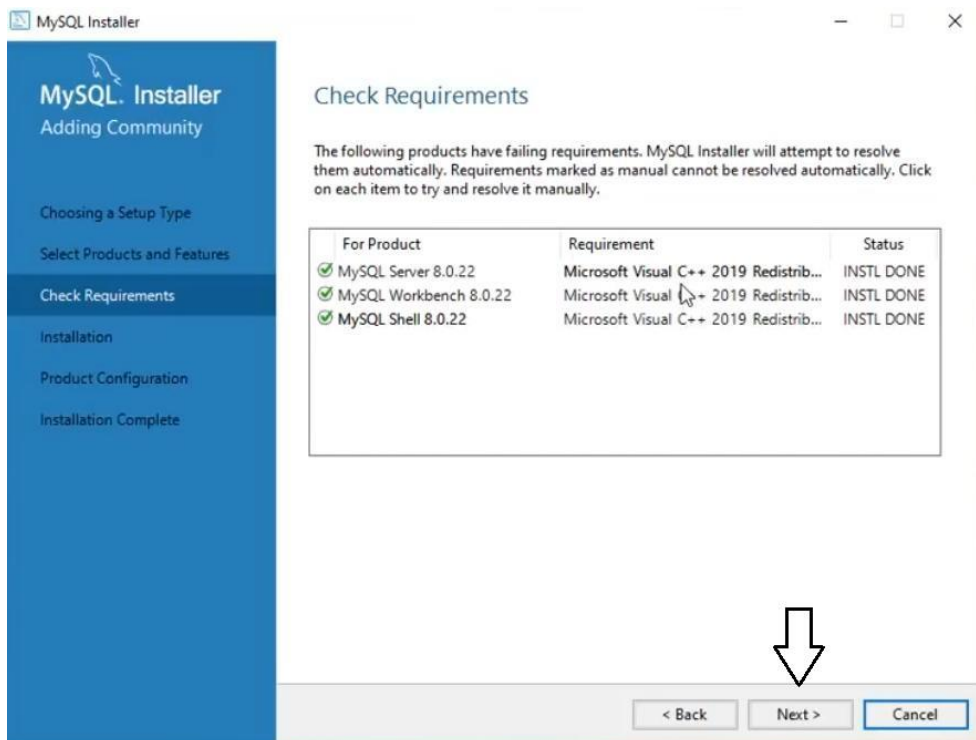

Step 14: Click on Next.

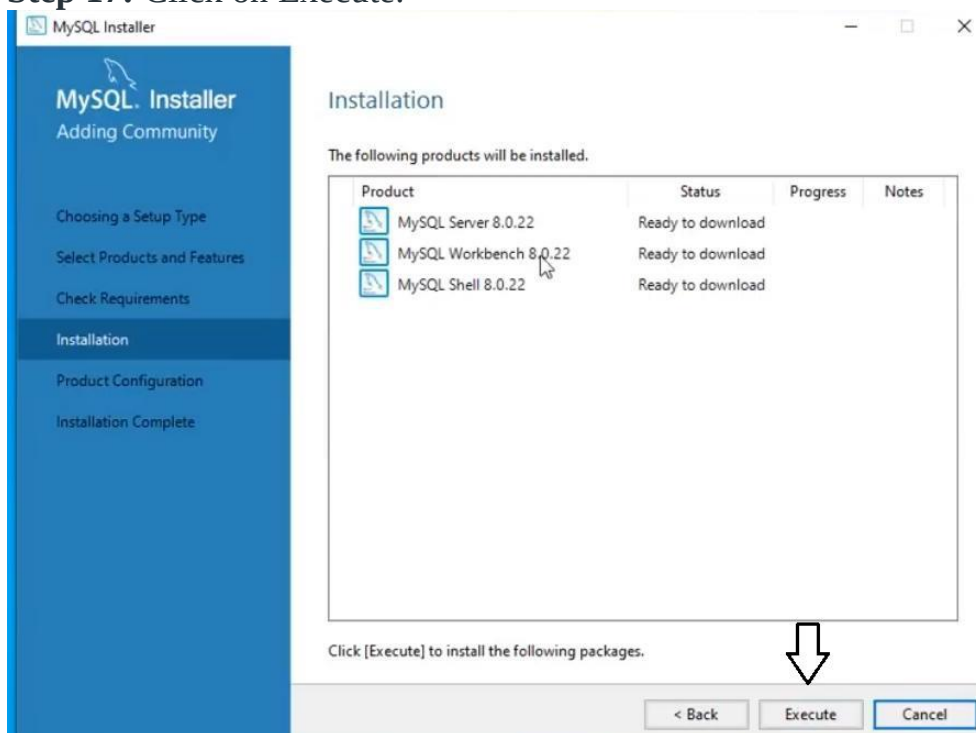

Step 15: Click on Execute.

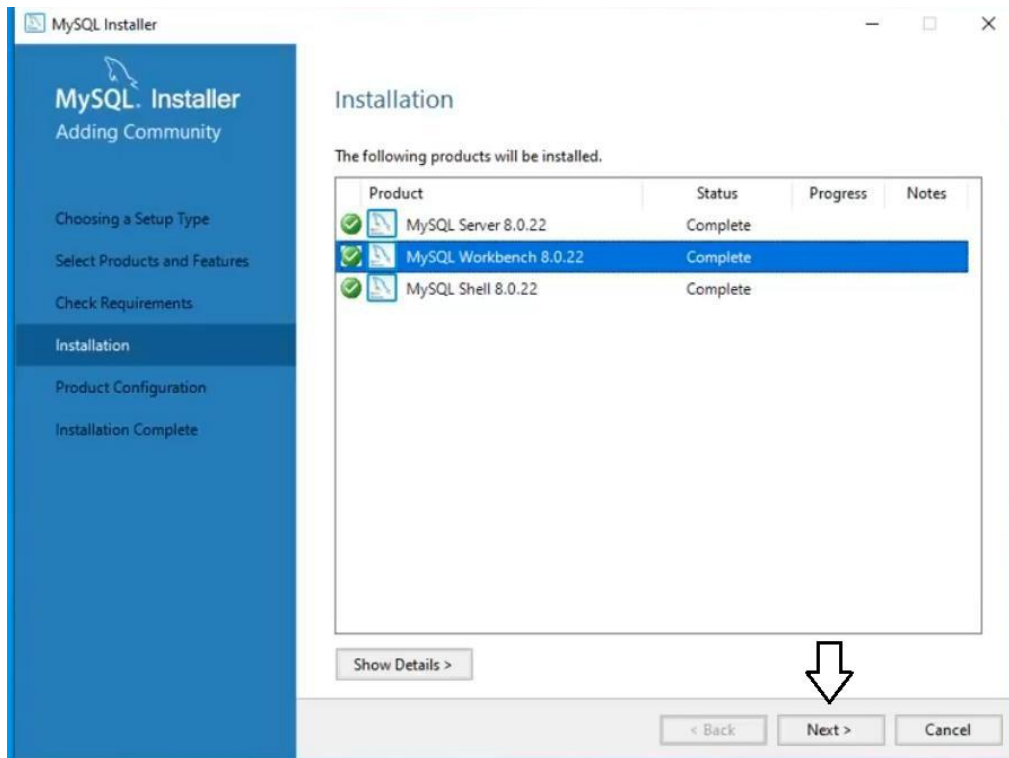

Step 16: Click on Next.

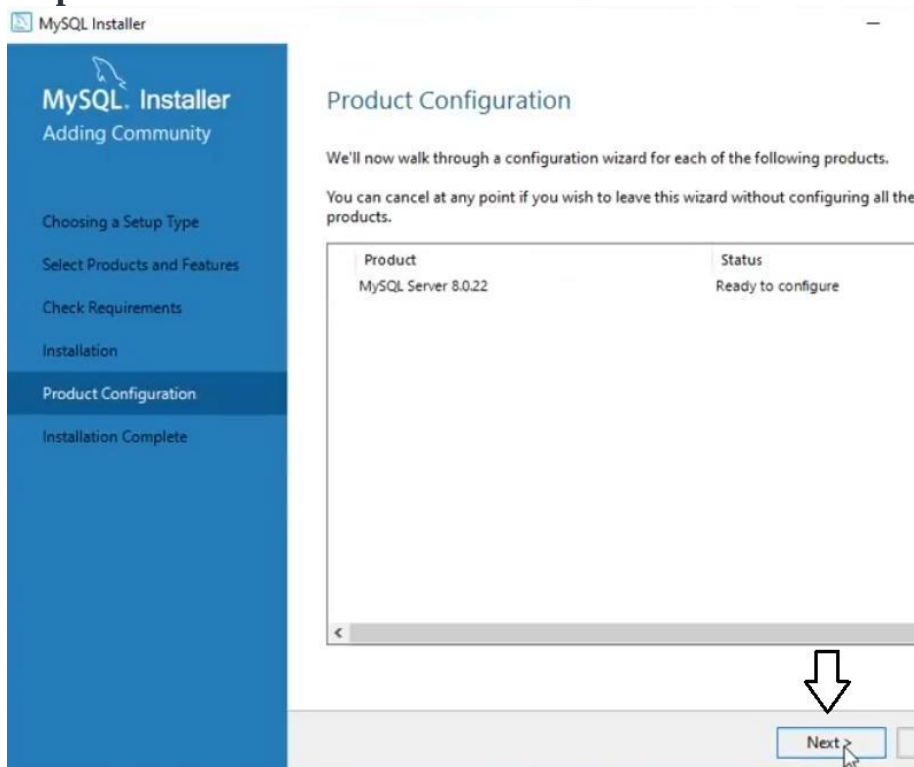

Step 17: Click on Execute.

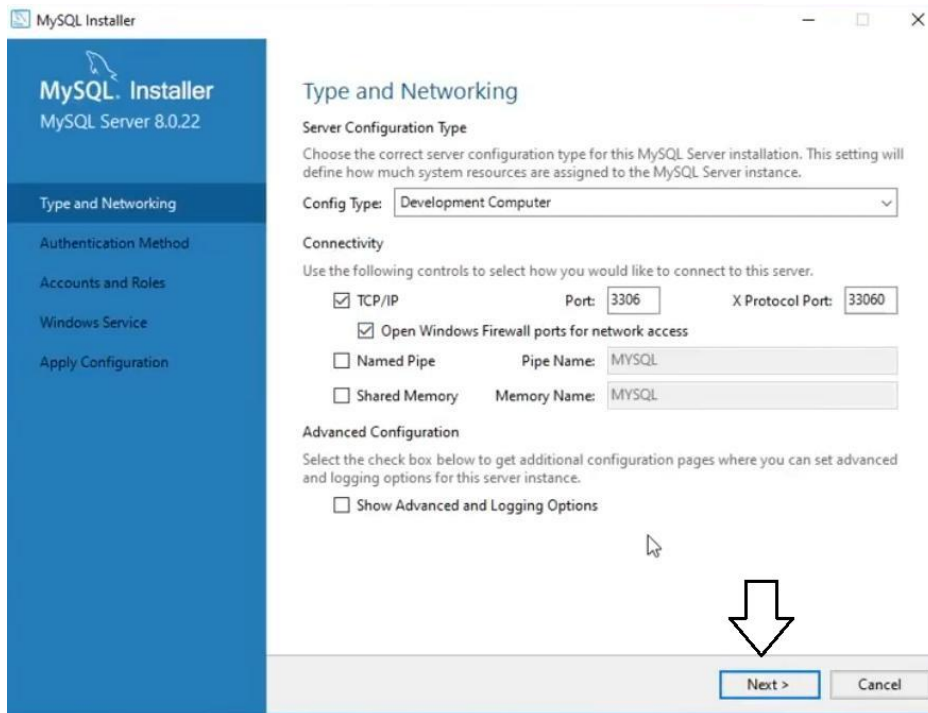

Step 18: Click on Next.

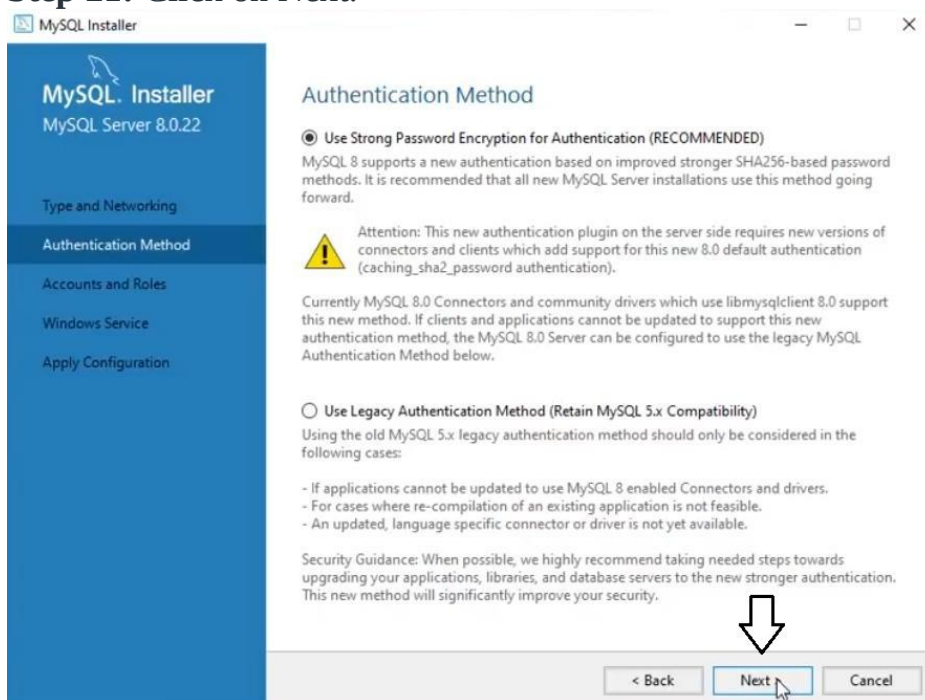

Step 19: Click on Next.

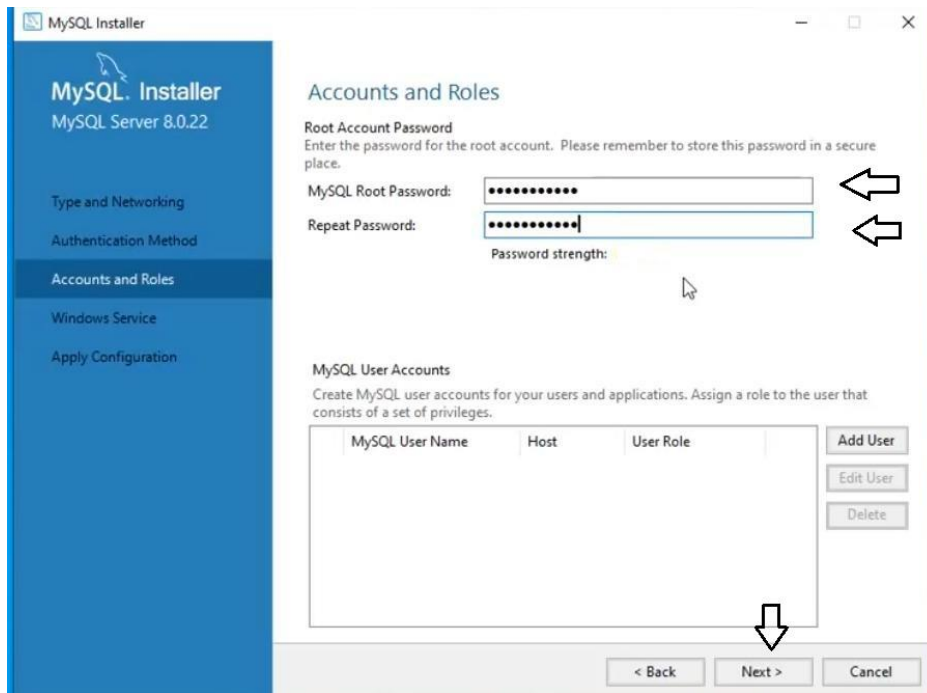

Step 20: Click on Next

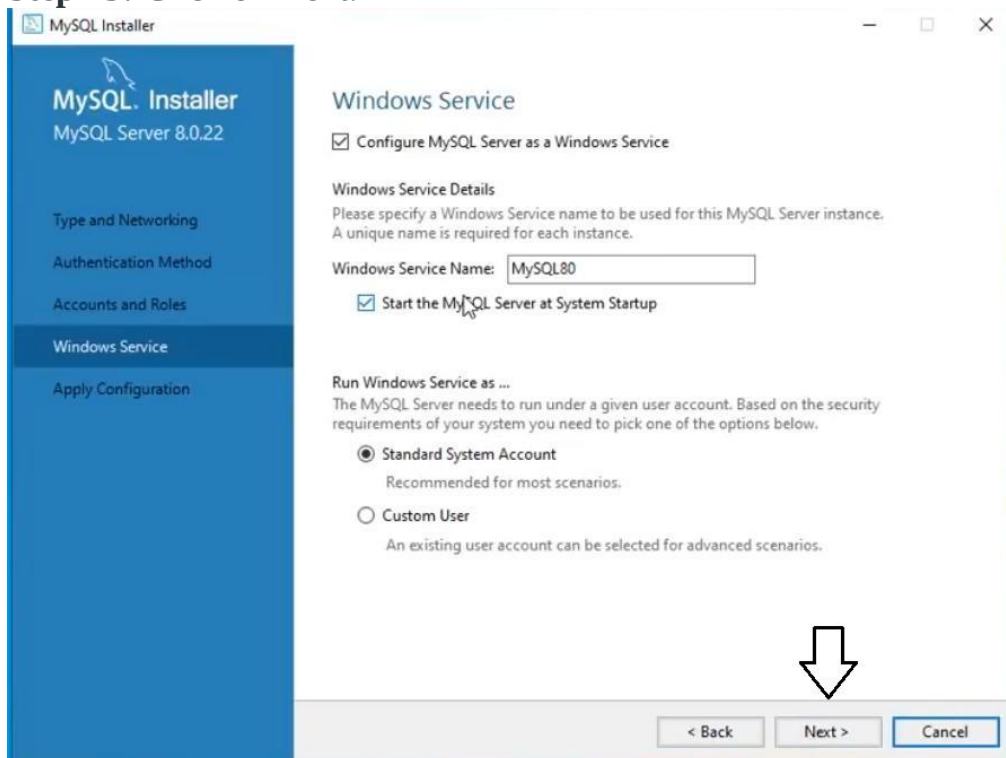

Step 21: Click on Next.

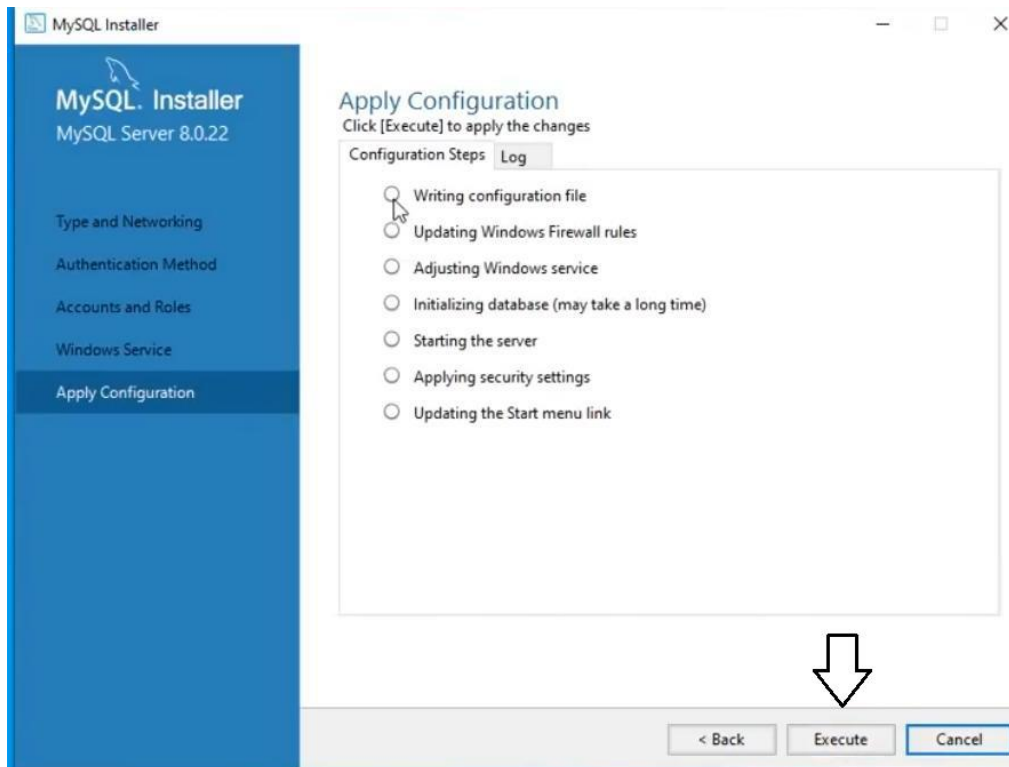

Step 22: Set your Password & Click on Next.

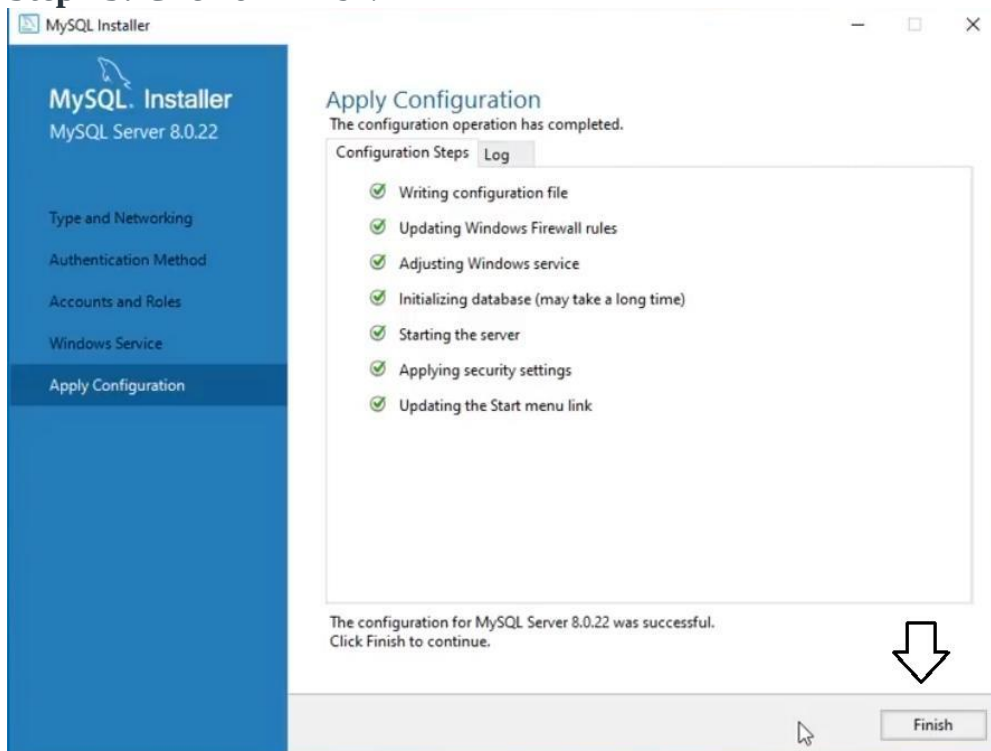

Step 23: Click on Next.

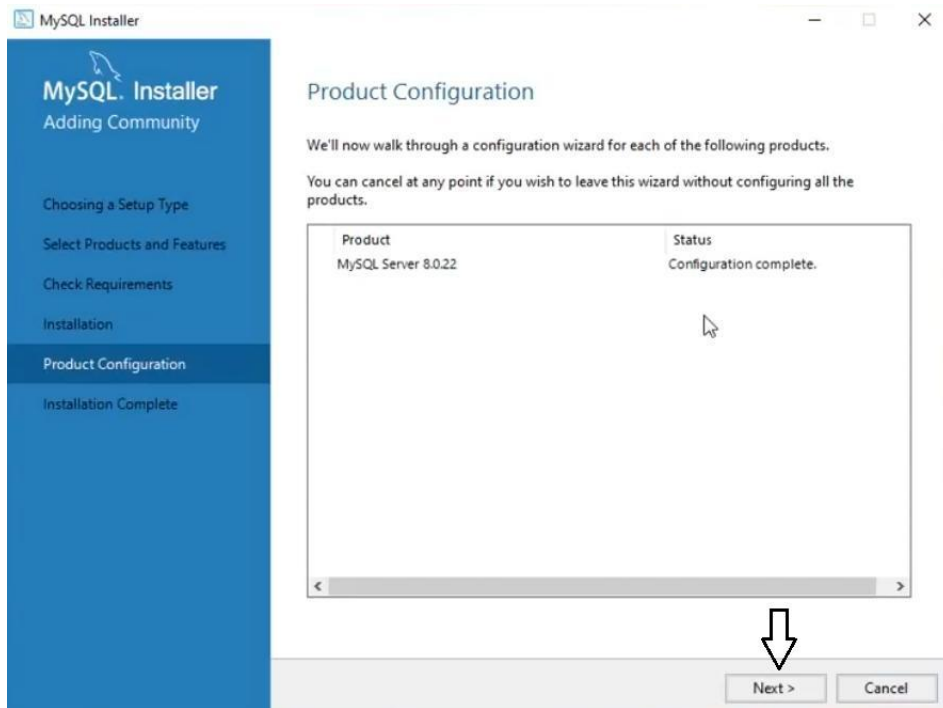

Step 24: Click on Execute.

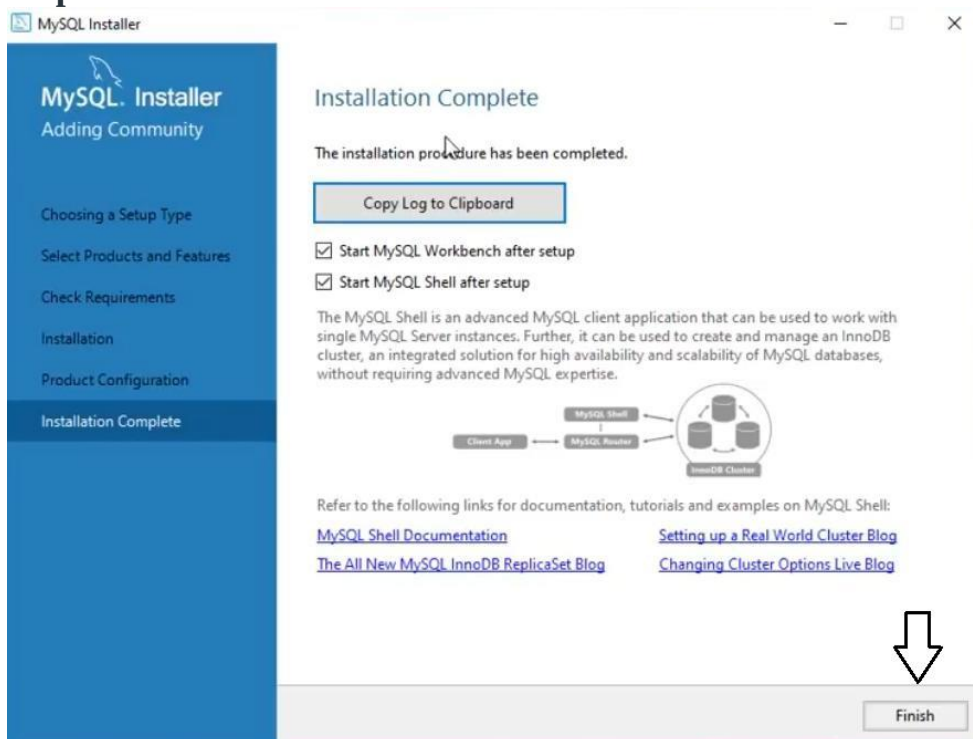

Step 25: Click on Finish.

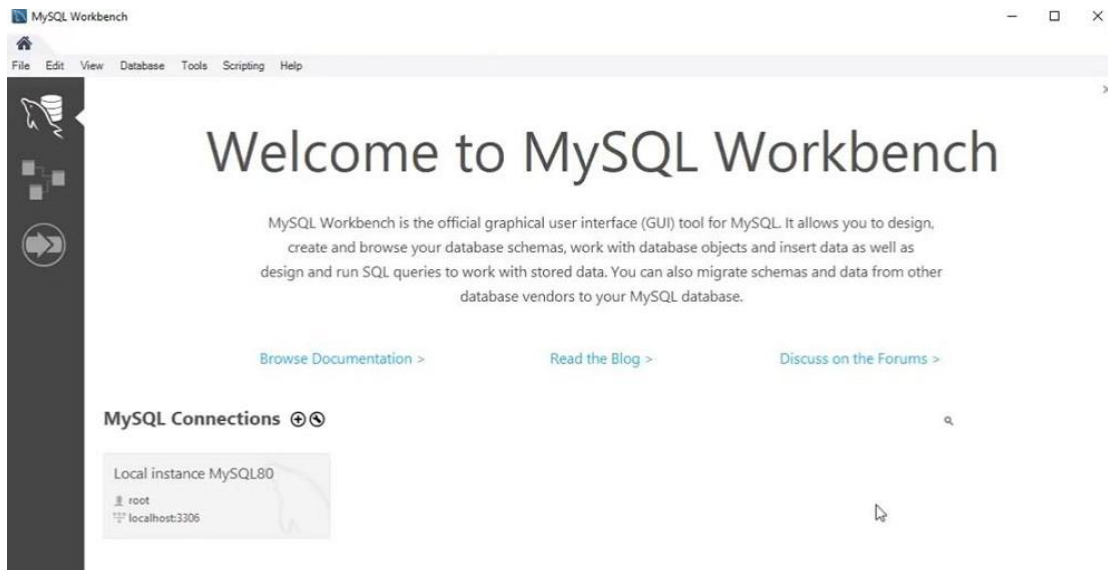

Step 26: Click on Next.

Step 27: Click on Finish.

Step 28: Then Automatically MySQL Workbench Window will open.

Hence, Your installation is successful.

- Download below two links which consists databases.

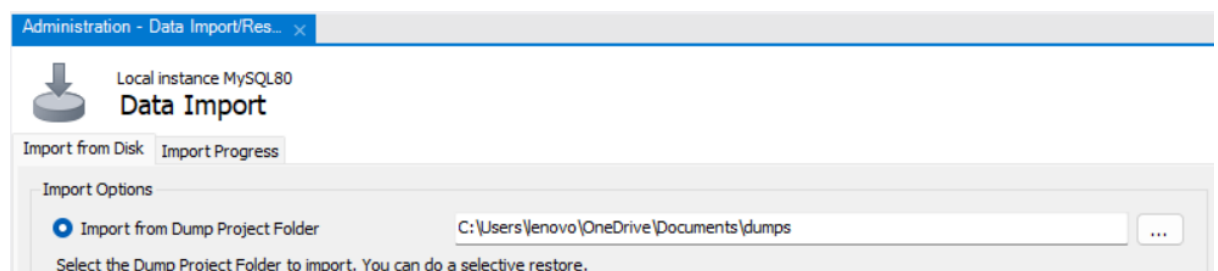

Link 1:

https://drive.google.com/file/d/1W5V9h_7p6oVw5h_T8K_0M1eNq3JYiklZ/view?usp=sharing

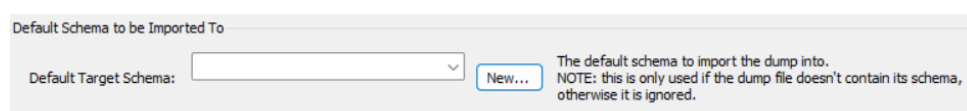

Link 2:

https://drive.google.com/file/d/1BqBA1lMbq2p65vsiQgi17iVXKcAW_Uv/view?usp=sharing

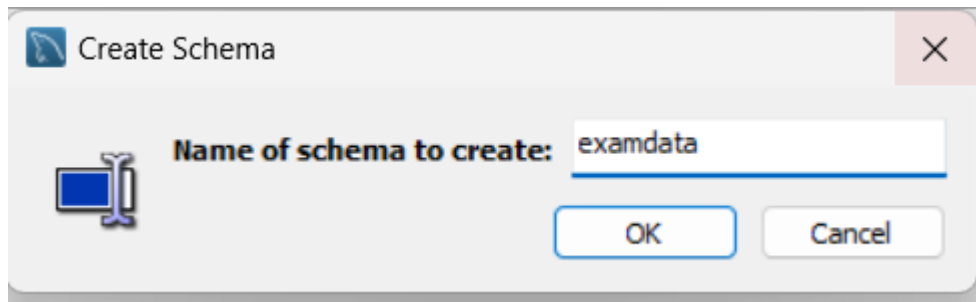

- Download the files from above two links and keep in your downloads folder.
- Now open your mysql connection in your MySQL workbench. And need to import the database into your connection.
- Go to server, go to data import.

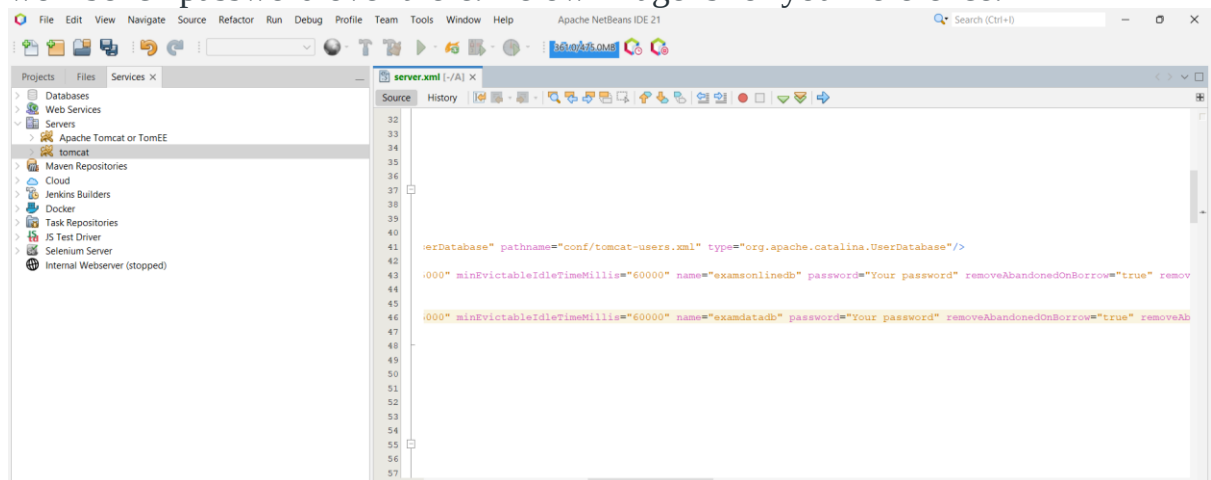

- Select your link1 file and place your link1 directory in the above path.
- Now, in default target schema, click on new button.

- Name Your schema as **examdata**.

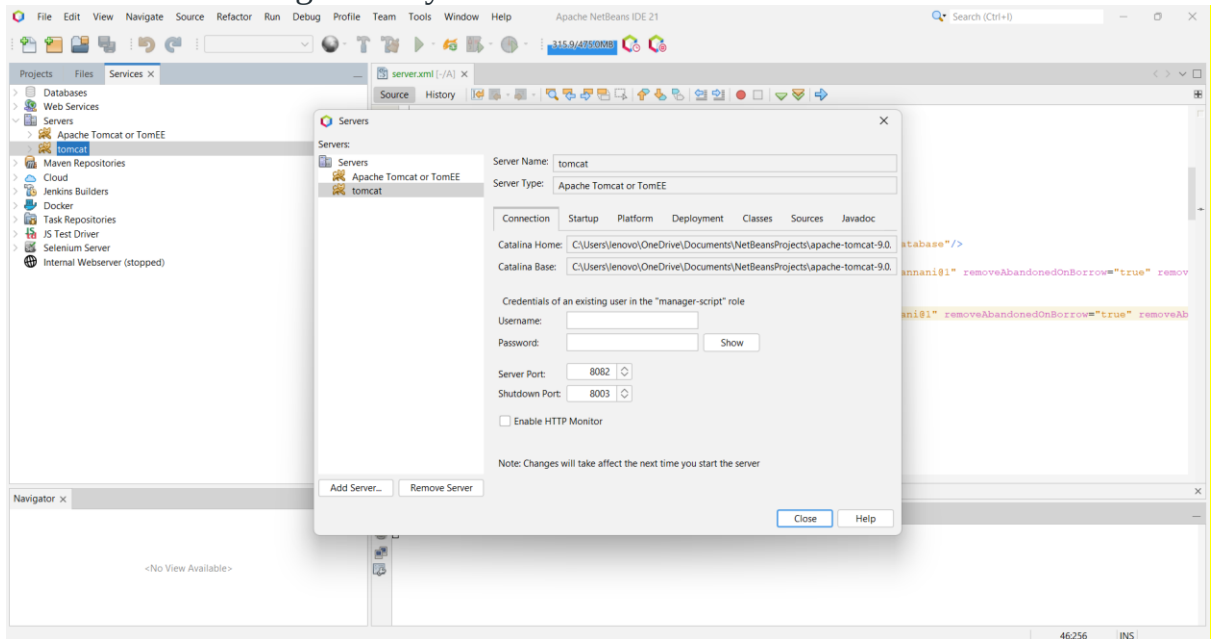

- In the same process, download the another file from link2 and import that downloaded file from link2. Name that file as **examsonlinedb**.
- Again go to Apache Netbeans 21 app, Go to server.
- In server, right click on the apache tomcat server which was already added. Click on edit server.xml .
- After entering into server.xml, there you need to enter your Database name and Your MySQL workbench password.
- In server.xml, in line 43 – You need to give your username as **examsonlinedb** and give your workbench password over there. And in line 46 - You need to give your username as **examdata** and give your workbench password over there. Below image is for your reference:

- By this database connection has done successfully. And You can run the project via right click on project and click on run.
- After running the project, go to browser and open <http://localhost:yourportnumber/adminlogin.jsp>
- Your port number will be visible in your apache tomcat server properties. In properties, go to connection. In connection, server port is your port

number. Below image is for your reference:

Now you can run the project successfully with all database connections.
